

Invitation to cooperation

Since its foundation (1993), the Journal of Coal Chemistry has been the only specialized scientific and industrial publication in Ukraine covering and promoting scientific developments and best practices in the coal and coke industries, analyzing and disseminating foreign experience and economic knowledge in this field, as well as in the field of chemical technology of fuels and lubricants.

Serial publishing of the Journal of Coal Chemistry began in 1998. The following year, by Resolution of the Higher Attestation Commission of Ukraine No. 1-05/7 of 09.06.99 'On Approval of the List No. 1 of Scientific Professional Publications in which the Results of Dissertation Works May Be Published', it was included in the list in the specialty 05. 17.07. Since then, the Journal of Coal Chemistry has not lost its professional status and, despite all the complications, continues to be published six times a year.

The principles that underpin the work of the Journal of Coal Chemistry are set out on the journal's website (<https://www.ukhin.org.ua/vuhlekhimichnyi-zhurnal.html>). In particular, the goal of the editorial policy of the Journal of Coal Chemistry is to promote the publication and improve opportunities for the publication, dissemination and promotion of scientific and industrial research results among scientists and practitioners, draw attention to promising and urgent problems of coal chemistry, coke chemistry and related industries, and enhance the exchange of views between the scientific community of Ukraine and foreign countries. That is why publications in the Journal of Coal Chemistry are free of charge for authors. And that is why electronic versions of the journal are freely available on the Scientific Periodicals of Ukraine platform – albeit with a 24-month delay due to the specifics of funding. The fact of targeted funding by producers confirms the interest of industry enterprises in the information disseminated by the journal.

The journal is presented in the international abstract and scientometric databases Google Scholar (articles since 2010), Index Copernicus (since 2016, <https://journals.indexcopernicus.com/search/details?id=45867>), Crossref Metadata Search (since 2018, prefix 10.31081/1681-309X), in the national database 'Scientific Periodicals of Ukraine' in the Vernadsky National Library of Ukraine of the National Academy of Sciences of Ukraine and is used in the educational process in the relevant specialties in leading technical universities.
